

XINZHU(WINTER) LI

xinzhuli@unc.edu | 4107109009 | Durham, North Carolina 27713 | WWW: <https://xinzhuli02.github.io>

Professional Summary

Interdisciplinary Information Science professional with a focus on human-centered AI, information interaction, and AI interpretability. Experienced in metadata management, digital archives, and research-driven system design, with interests in how people understand, trust, and interact with complex AI systems. Skilled in organizing and translating complex information into accessible, meaningful, and user-oriented experiences across diverse cultural and technological contexts.

Education

University of North Carolina At Chapel Hill | Chapel Hill, NC

Master of Science in Information Science

05/2026

Relevant Coursework: Database & Text Mining & Information Retrieval

Johns Hopkins University | Baltimore, MD

Master of Science in Education

07/2022

Beijing Language And Culture University | Beijing, China

Bachelor of Arts in Language And Literature

06/2021

Skills

Data & Analysis

- Data cleaning, structuring, and validation (Excel, SQL)
- Basic data analysis and reporting for large datasets
- Text analysis and NLP fundamentals

Data & Information Management

- Metadata creation and standardization (e.g., Dublin Core)

- Digital collections and data organization
- Data quality control and schema alignment
- Archival digitization and large-scale data workflows

Communication

- Cross-cultural communication (Mandarin-native; English-fluent; Japanese-basic)

Work Experience

North Carolina State University Special Collection | Raleigh, United States

Digitization Assistant

02/2025 - 08/2025

- Processed and structured metadata for 300+ records, improving data quality and retrieval efficiency
- Standardized data fields using established schemas (e.g., Dublin Core) to ensure consistency across datasets
- Conducted data validation and discrepancy resolution to improve dataset reliability and usability
- Supported data workflow documentation and version control in a collaborative digital environment

Johns Hopkins Center For Talented Youth | Baltimore, Maryland

Research Assistant

04/2022 - 02/2023

- Conducted research on spatial cognition (e.g., mental rotation, tangram tasks) and developed a classification framework to support assessment design

- Proposed improvements to assessment systems, including difficulty calibration and hybrid online/offline delivery to enhance accessibility
- Analyzed disparities in public education resources to inform more equitable evaluation approaches
- Collaborated with engineers to improve data reliability and translate manual workflows into structured, programmable systems
- Covered China's energy sector, focusing on new energy industry trends and policy developments.
- Participated in the SNEC International Photovoltaic Exhibition (Shanghai), gaining first-hand industry insights.
- Conducted interviews with energy experts and produced reports on new energy topics.
- Edited publications and managed the WeChat Official Account, enhancing content reach and communication impact.

People's Daily | Beijing, China

Interviewer

09/2020 - 12/2020

Projects

Hierarchical Text Classification of Amazon Reviews

- Processed and analyzed large-scale product review data (40K training / 10K test samples) to support multi-level text classification
- Designed and implemented hierarchical classification models (cat1 → cat2 → cat3) to structure unstructured text into multi-level categories
- Compared direct classification and sequential hierarchical approaches, improving fine-grained classification accuracy from 38.8% to 44.79%
- Conducted error analysis on data imbalance and error propagation, identifying key factors affecting model performance
- Performed feature engineering and model evaluation using LightSide (Naive Bayes, unigram features)

Data Interaction & Usability Analysis (Google Sheets)

- Identified key usability barriers in spreadsheet-based data workflows, including low interpretability of formulas and limited visibility of data dependencies
- Analyzed how opaque formula logic reduces user confidence and limits effective data interaction in collaborative environments
- Developed design solutions (e.g., process visualization and annotation features) to improve data transparency and user understanding
- Demonstrated how improved data interpretability can enhance user engagement and reduce errors in data-driven tasks
- Collaborated in a team to evaluate data workflows and propose scalable improvements to data usability
